Subject: Protect Colorado From Uranium Mining

Dear Ms. Stanton:

I am writing to you today in support of protecting our water and our lands from the impacts of uranium mining and to ensure that the public is heard on issues of mine prospecting.

The final rules for House Bill 08-1161 and Senate Bill 08-228 should adhere to the following principles:

- * Uranium companies should be held accountable for cleaning up their mess and returning groundwater quality to its original state that existed before any mining or mine prospecting took place.
- * All uranium companies should play by the rules as a "designated mining operation" and submit environmental plans to minimize the impacts of toxic uranium pollution on our land, water and communities.
- * The public, local governments, and other stakeholders must be notified about mine prospecting activities and have the right to submit comments on proposed prospecting permits.
- * The public and stakeholders should have the ability to appeal mine prospecting permit decisions to ensure that the environment and public health are protected in those decisions.

Very sincerely,

michael lewis

Subject: Adopt strong uranium mining rules to protect Colorado's water

Mar 16, 2010

Colorado Mined Land Reclamation Board members
1313 Sherman Street, Room 215
Denver, CO 80203

Dear Mined Land Reclamation Board members,

I urge the board to adopt rules that ensure the strongest environmental and public health protection of groundwater quality from uranium mining operations and to ensure full public involvement and transparency at all stages of mining development.

Protecting our water quality is critical for Colorado's environmental and economic health. Taking the lead among states, in 2008 Colorado established strong groundwater restoration standards for uranium mining; these standards are set according to the baseline groundwater characterization of an aquifer affected by mining.

The Mined Land Reclamation Board rules should accurately reflect the spirit and letter of these requirements, and ensure that the baseline and the resulting groundwater restoration standards are clearly defined prior to any mine exploration, prospecting or development. Further, once the pre-mining baseline site characterization is established, the rules should preclude changes to that baseline once exploration or mineral development activity begins. Lastly, the rules should confirm the requirement in the law that all uranium mining operations abide by the protective "designated mining operation" standards enacted after the Summitville Mine disaster for operations with potential to threaten local water quality.

I also urge the board to adopt rules that expressly provide the affected public and local governments the opportunity both to submit comments and to seek administrative review of prospecting approvals.

Sincerely,

Mrs. Andria Lopez

Subject: Re: HB08-1161 & SB08-228 rulemaking

Dear members of the Mined Land Reclamation Board:

I am writing to you today in support of protecting our water and our lands from the impacts of uranium mining and to ensure that the public is heard on issues of mine prospecting.

The final rules for House Bill 08-1161 and Senate Bill 08-228 should adhere to the following principles:

*Uranium companies should be held accountable for cleaning up their mess and returning groundwater quality to its original state that existed before any mining or mine prospecting took place.

*All uranium companies should play by the rules as a "designated mining operation" and submit environmental plans to minimize the impacts of toxic uranium pollution on our land, water and communities.

*The public, local governments, and other stakeholders must be notified about mine prospecting activities and have the right to submit comments on proposed prospecting permits.

*The public and stakeholders should have the ability to appeal mine prospecting permit decisions to ensure that the environment and public health are protected in those decisions.

Very sincerely,

Leslie Bentley

Dear members of the Mined Land Reclamation Board:

I am writing to you today in support of protecting our water and our lands from the impacts of uranium mining and to ensure that the public is heard on issues of mine prospecting.

The final rules for House Bill 08-1161 and Senate Bill 08-228 should recognize: the valence state of uranium goes from the +4 to the +6 state when exposed to air as a result of exploration or mining activity. In a watershed serving as a drinking water source this means the uranium is 1,000 of times as likely to be taken up (adsorbed) into the bodies of people drinking water containing these uranium ions.

Uranium is concentrated highly in specific locations within the body. Also, one mechanism for removal of uranium from pregnant women is across the placental wall -- to the fetus. The briefest review of drilling for uranium in a drinking water supply shows the absolute biological absurdity and the waiting negative health and economic impacts.

I thought uranium in drinking water was put to rest when the Denver Water Board said, "No" to exploration to Wyoming Minerals Corporation in 1976.

Very sincerely,

Jack Miller
